Metal Shark supports those who serve and protect by offering the most complete range of mission-optimized aluminum high performance boats in the industry. Our military clients include the United States Marines, Navy, Coast Guard, Army, and over 60 partner nation military agencies across Africa, Asia, the Caribbean, Europe, Latin America, and the Middle East. In addition to ongoing fleet construction for our fighting forces, each week Metal Shark delivers new vessels to state, local, and municipal law enforcement and fire rescue customers, with well over 2,000 vessels now in service worldwide.

Metal Shark is an engineering-centric, customer-focused company with an in-house team of over 50 naval architects and marine engineers. We continually evolve our boats by listening to our customers and solving their challenges through innovative solutions. We offer a full portfolio of globally proven hullforms including **Defiant** monohull pilothouse vessels, **Endurance** catamarans, **Fearless** stepped-bottom high-performance craft, **Relentless** collared center consoles, and **Courageous** workboats. Each of these is 100% digitally designed and optimized for the specific mission profiles of our military and first responder customers. Meanwhile, our **Sharktech Autonomous Vessels** division continues to lead the way with a complete range of unmanned solutions.

Markets: Law Enforcement

28 RELENTLESS

Carefully considering the challenges of modern law enforcement missions, Metal Shark has developed a complete portfolio of next-generation patrol boats offering modern, mission-enhancing features, with each model based upon a globally proven hull design. The result is a professional-grade patrol boat that provides greater comfort, efficiency, and safety to law enforcement officers.

Metal Shark is proud to support a growing list of federal, state, local, and municipal law enforcement agencies that choose these purpose-built law enforcement patrol boats for their unmatched performance and crew-friendly functionality.

With its in-house team of over 50 engineers and naval architects and well over 2,000 total vessels delivered to date, Metal Shark offers law enforcement agencies a wide range of proven hulls and unmatched design expertise.

36 FEARLESS

Markets: Law Enforcement

Not Just a Center Console, But a Command Center.

Metal Shark knows that law enforcement officers spend the majority of their on-water patrols working between the console, helm seat, and the sides of the boat. That's why we've given such careful attention to our console design. Our center console LE models feature an oversized integrated hard top with drip rails to offer protection from the elements during long hours on the water.

Full-height three-panel tempered glass windshields and available canvas enclosures add extra protection to increase comfort and reduce fatigue. The helm and overhead electronics pod have been ergonomically optimized, with vessel controls, switches, and electronics placed for easy, intuitive operation. The entire helm area features glare-reducing matte finish blackout coating to enhance helm visibility, and a large weather-tight in-dash storage compartment with 12-volt USB power supply allows for the storage and operation of laptops and printers.

Flat, obstruction-free floors and wide walkways allow easy access all around the boat, and officers will appreciate the heavy-duty foam coaming pads and well-placed toe rails that make it easier to safely lean out of the vessel. When it comes to the proper design of law enforcement vessels, Metal Shark has done its homework – and it shows.

Markets: Law Enforcement

29 DEFIANT

Pilothouse Vessels - A Clear Advantage.

Metal Shark's Defiant-class pilothouse vessels give law enforcement officers a clear tactical advantage, offering the latest advancements in crew comfort, efficiency, and safety. One mission-enhancing benefit of Metal Shark's innovation is the unmatched visibility afforded by our signature Pillarless Glass pilothouse, which significantly improves helm visibility by reducing the dangerous blind spots common on boats with smaller, framed windows.

Additional features include glare-reducing matte helm finish, and overhead spotter windows that offer an upwards view during helo ops or while operating alongside taller vessels or structures. All controls, instrumentation, comms and nav equipment are positioned for intuitive easy use, allowing for safe operation by a single officer.

Markets: Law Enforcement

Whether large or small, there's a purpose-built Metal Shark to fit your department's needs and budget. Metal Shark further supports its law enforcement customers by providing industry-leading customer service and technical support, helping departments to keep their boats on water and in service. We invite you to contact us today to find out more. You'll find we speak your language, fluently.

Markets: Fire Rescue

Metal Shark works with firefighters from coast to coast and around the world to continually hone our understanding of the challenges faced by fire fighting forces. We coordinate with leading suppliers of fire rescue equipment to assure total systems integration, as opposed to bolt-on afterthought solutions. We strive to engineer and produce the best performing, most dependable, safest, and ultimately the most crew-friendly fire rescue vessels available.

Each Metal Shark fire rescue offering is based on repeatedly proven hull forms. Our 100% digital designs are built to exact tolerances for repeatable results. Our military-proven build quality is second to none. And our next-generation fireboats offer the latest advances in on-water fire fighting technology. Read on to learn more about the many reasons to trust Metal Shark to build your agency's next fireboat.

Markets: Fire Rescue

Pilothouse Vessels - A Clear Advantage.

Metal Shark's industry-leading fireboats offer the latest advancements in crew comfort, efficiency, operability, and safety. One example of Metal Shark's innovation is our signature pillarless glass pilothouse, which significantly reduces the dangerous blind spots commonly found on conventional pilothouse vessels. Firefighters appreciate the near 360-degree view from a Metal Shark pilothouse, especially while operating during night missions or other periods of reduced visibility.

Additional features include glare-reducing matte helm finish, and overhead spotter windows that offer an upwards view during helo ops or while fighting fires aboard taller vessels or structures. All controls, instrumentation, comms and nav equipment are positioned for intuitive easy use, allowing for safe operation by a single officer.

US NAVY 40 PB

Proudly supporting those who protect and serve. Metal Shark is a leading designer and builder of military vessel fleets for the United States Navy, Marine Corps, Coast Guard, Air Force, and the militaries of partner nations worldwide. Metal Shark continues to win historically large defense contracts by using its formidable engineering power to solve complex design challenges and meet highly technical requirements.

The company has established engineering and production practices that yield maximum performance and repeatable results. From 100% digital design, cutting, and sheet metal bending, to the extensive use of jigs to assure precise tolerances during the welding process, Metal Shark leverages its serialized building processes and considerable economies of scale to assure competitiveness, consistency, and on-time deliveries. From precision welds to mil-spec wiring, a Metal Shark is built as if lives depend on it. Because, often, they do.

29 DEFiant

A Vital Component of the United States Defense Industrial Base.

Metal Shark has produced approximately half of the vessels in the current United States Coast Guard's small boat fleet (over 600 units in all). Company facilities carry a US Government Security Clearance, as Metal Shark routinely supports multiple US Navy fleet builds, including 40 PB, 33 Harbor Security Boat (HSB), and the 85' Near Coastal Patrol Vessel (NCPV). Metal Shark recently served as the development and production center for the Marine Corps Long Range Unmanned Surface Vessel Program (LRUSV) and continues to push the technology envelope with its Sharktech Autonomous Vessels division.

In all, Metal Shark has built well over 1,500 boats for the US Armed Forces, with more new boats completing and entering service each month. Each of these boats feature a proven hull form from Metal Shark's vast portfolio, which is then optimized to meet specific mission requirements.

The vessels shown here represent a small portion of our military patrol craft portfolio. While our standardized platforms have been optimized for performance and reliability, each Metal Shark military vessel may be configured to meet client requirements. Available pre-engineered options range from different propulsion choices to various seating choices and optional equipment. We invite you to contact us today to find out more.

Markets: Autonomous Vessels

Launched in 2018 as a wholly-owned subsidiary focused on the advancement of autonomous technology, Metal Shark's Sharktech Autonomous Vessels division merges software and hardware to develop turn-key, "check the box, get the option" autonomous-capable craft.

Sharktech designs, builds, and delivers unmanned and remote-operated vessels, streamlining the industry's path to autonomy and simplifying the process for all clients, whether government or commercial, and has delivered over 400 autonomous or remote operated vessels to date.

Markets: Autonomous Vessels

38 DEFIANT

29 DEFIANT
UNMANNED TEST VESSEL

Metal Shark's prolific Sharktech division has produced unmanned craft ranging from semi-submersible micro USVs to high-speed offshore vessels more than 50' in length, equipped with various propulsion systems including gasoline and diesel outboards, electric inboards, and diesel inboard waterjets and surface drives. Autonomy systems may be integrated into existing Metal Shark platforms like the 29 Defiant and 38 Defiant shown here, or a bespoke platform utilizing one of our many proven hull forms. Consolidating vessel design and autonomy integration all under one roof greatly simplifies the process for our clients.

Due to its proficiency in the unmanned space, in 2019 Metal Shark was selected by **US Navy PMS 406** for the **Unmanned Family of Systems Multi Award IDIQ**, a blanket Navy contract covering multiple topics in the autonomous space. In 2020, Metal Shark was selected to supply an autonomous 29 Defiant test vessel to the **US Coast Guard Research and Development Center**.

Markets: Autonomous Vessels

LRUSV
LONG RANGE UNMANNED
SURFACE VESSEL SYSTEM

In 2021 the US Marine Corps selected Metal Shark to design, build, test, and implement its tiered, scalable weapons system, the **Long Range Unmanned Vessel System (LRUSV)**. LRUSV was designed to usher in a new era of naval technology while increasing the lethality of US forces, with a network of unmanned vessels traveling autonomously for extended ranges and transporting loitering munitions to address targets at sea and on land.

Developed By Metal Shark's Sharktech division under an "Other Transaction Authority" (OTA) Agreement with Marine Corps Systems Command, the tiered, scalable LRUSV weapons system provides the ability to accurately track and destroy targets at range throughout the battle space. While fully autonomous, the vessels may be optionally manned and carry multiple payloads, which they are capable of autonomously launching and retrieving.

Models: **RELENTLESS** Collared Center Consoles

26 RELENTLESS

33 RELENTLESS

Designed specifically for law enforcement officers, fire fighters, and other first responders, Metal Shark's **Relentless**-class center console models have also gained popularity with military agencies, towboat operators, and others who desire a fast, responsive, stable and versatile vessel with a crew-friendly center console arrangement.

Relentless-class center consoles are characterized by their performance hulls and by their urethane-sheathed, foam-filled collar fendering system that provides impact protection while docking or during boarding or alongside maneuvers.

Other notable features of this popular and proven craft are its wide-open layout, with a large, flat, non-skid floor that provides sure footing and plenty of deck space, and wide gunnels that allow for full mobility while working between the helm seat, console, and sides of the vessel. Integrated port and starboard dive reliefs with removable three-step ladders facilitate boarding and recovery operations.

Models: FEARLESS SVVT Stepped-Hull High Performance Craft

Metal Shark's **Fearless** line of high performance craft were developed in response to growing demand among military and law enforcement operators for larger and faster interdiction craft capable of delivering greater range and better seakeeping.

Each Metal Shark Fearless model is characterized by its high-performance ventilated "SVVT" stepped-hull running surface designed by renowned naval architect Michael Peters. These popular and proven high-performance craft are in service with the US Navy, NOAA, foreign militaries, and multiple law enforcement and maritime security agencies.

Metal Shark's Fearless models range in size from 32' in length up to the 52' Fearless Super Interceptor, an ultra-high performance, offshore-capable craft capable of reaching top speeds in the 70-knot range and cruising at 50 knots for over 12 hours. Our Fearless models represent a radical leap forward while still boasting an extensively proven running surface and over a decade of parent-craft lineage.

Models: COURAGEOUS Center Console Workboats

Originally designed by Metal Shark for the US Coast Guard TAN-B (Trailerable Aids to Navigation Boat) program, our venerable and proven **Courageous**-class center consoles are renowned and respected for their ruggedness, simplicity, and reliability. Their wide-open layouts offer unsurpassed utility, making them ideal for fire rescue, law enforcement, and workboat missions. Deep and beamy with extra freeboard, each Metal Shark Courageous model features wide reverse chines for stability, a prominent flared bow for a dry ride, an unbelievably spacious cockpit, and an extra-large non-skid cockpit floor.

For delivering maximum payload and towing capacity in a compact, trailerable vessel, our Courageous models are unmatched. These rugged workhorses are built for serious action. From available push knees to oversized dive doors, bow doors, davits, oversized hard tops and more, Courageous models are fully optimized with smartly designed, crew-friendly features our first responder and military customers appreciate.

Models: **DEFIANT** Monohull Pilothouse Vessels

Metal Shark's globally proven line of **Defiant**-class monohull pilothouse models range in size from 27' to over 100' in length and have been optimized for a wide range of military and first responder mission profiles. Hundreds of Defiant-class vessels are in service with US and foreign militaries and law enforcement agencies, and our **Defiant NXT** models, optimized for rescue missions, are increasingly popular among firefighters. Metal Shark also offers a range of Defiant-class pilot boat offerings, which can be found in our Commercial brochure.

Defiant models feature our signature "Pillarless Glass" pilothouse arrangement which substantially enhances visibility by reducing the dangerous blind spots which are an unfortunate drawback of conventional pilothouse vessels. The Metal Shark difference doesn't stop there. Each Defiant-class platform, from small, trailerable, aircraft-transportable 27s and 29s, to the largest extended-range offshore offerings, lead the industry with inspired ideas and practical, crew-friendly features evident from bow to stern.

Evolution Through Innovation

Fire Rescue

Law Enforcement

Military

As an engineering-centric, customer-focused company, Metal Shark is committed to driving the evolution of our product through innovative design and smart solutions. Through ongoing product improvement, we strive to engineer and deliver the best performing, safest, and most dependable purpose-built aluminum boats on the water. Each boat we build is the result of innovative thinking applied to a globally proven hullform.

Metal Shark works hand in hand with customers to solve complex mission challenges and meet highly technical requirements, continually refining engineering and production practices to assure maximum performance and repeatable results.

From 100% digital design, cutting, and sheet metal bending, to the extensive use of jigs to assure precise tolerances, we leverage our serialized building processes and substantial economies of scale to assure competitiveness, consistency, and on-time deliveries for each of our first responder and military customers.

From precision welds to mil-spec wiring, our fanatical attention to detail is evident. Proud to support those who serve and protect, we build each Metal Shark as if lives depend on it. Because, often, they do.
